

| Specifications       |                                                                             |
|----------------------|-----------------------------------------------------------------------------|
| Description          | Lifts and rotates eurobin to mix product                                    |
| Materials            | 304 grade stainless steel with 316 grade product contact parts              |
| Bin type             | 200 and 300 litre eurobins (DIN 9797)                                       |
| Safe working load    | 350kg                                                                       |
| Power supply         | 380-480 V 3 phase, 50Hz -60Hz, 16 amp                                       |
| Control voltage      | 24V DC                                                                      |
| Control type         | Automatic operation. Sensor confirms correct position of bin                |
| Guarding             | Fixed sheet panel guards. Door interlocked with solenoid lock safety switch |
| IP rating            | IP65 minimum                                                                |
| Machine mass         | 850kg                                                                       |
| Air supply           | Dry, clean compressed air at 6 bar pressure                                 |
| Free air consumption | 90 litres/cycle, 270 litres/minute flow rate                                |
